

SMART E II

SOIL STABILIZER

ABOUT US

EP&A Envirotac Inc. has been in the soil stabilization business for over many years. Our product SMART E II is the most used dust control chemical by the United States Military in the Middle East. It is used for roads, helicopter pads, runways, etc. It was in Camp Rhino where the product received its colorful moniker Rhino Snot, when it was used to prevent helicopter "brown outs" a problem caused by loose blow sand, reducing visibility.

In addition to the United States Military, SMART E II has been applied on mines, construction sites, roads, and so much more. Contract us anytime for consultation on your current or next project.

SMART E II

SOIL STABILIZER

PRODUCT DESCRIPTION

SMART E II is the ultimate soil stabilizer / dust abatement on the market today. It's a high performance, low cost acrylic copolymer. When applied to various soils or sands, it will penetrate and extend down into the soil to create a tough layer of protection.

Upon drying, SMART E II binds the soil's particles by forming a clear, plastic and resin bond. When increasing the concentration of SMART E II you can create a durable water-proof surface that will be pliable and hard enough to minimize surface damage, withstand traffic, and not allow water or air to penetrate.

Road Stabilization

Slope Stabilization / Erosion Control

acrylic copolymer that is not only effective for stabilizing fugitive dust and erosion; it also effective for lowering job cost and reducing water consumption.

EP&A Envirotac Inc. manufactures and distributes SMART E II globally, we also help in consulting; and in some cases applying the product. With our many years in the soil stabilization industry we have developed the best application rates and procedures to insure success every time applied.

EP&A Envirotac Inc. would like the opportunity for your company to use our product so that it may experience the benefits of SMART E II as the solution for all you soil stabilization needs.

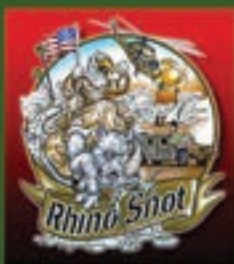

FEATURES

SMART E II is an acrylic copolymer working in a wide array of conditions, such as dust abatement (PM 10), road and sub-base stabilization, excellent long - term and short term erosion control to finished pads and untreated slopes. SMART E II will resist UV rays, water, and alkaline breakdowns for long periods of time. Environmentally safe, noncorrosive, nonflammable, no offensive odor, and ecologically safe. SMART E II will not leach or track. It's easily mixed with water, safe and clean to use. Proven to be one of the most cost effective means, in comparison to other materials and water trucks.

PERFORMANCE

SMART E II has been proven to work better than organic road resins, chloride products, lignosulfonates, oil, and asphalt emulsions previously used for dust suppression.
